WORKSHOP NUTS & BOLTS OF TSCM

EAVESDROPPING DETECTION SOLUTIONS®
A Division of CBIA

Don't let your organisation pay for inferior services

• **Durban**	**21 – 22 May 2012**	• **Cape Town**	**28 – 29 May 2012**
• **East London**	**11 – 12 June 2012**	• **Centurion**	**27 – 28 June 2012**

The workshop is aimed at helping **risk managers, security professionals** and **information protection officers** find ways of managing the threat of electronic eavesdropping. The growth in surveillance enabling technology in recent years has made the technical aspects of electronic surveillance detection far more complex.

The purpose of this **two-day workshop** is to acquaint those responsible for information protection in their organisations with all the aspects of the management of the technical surveillance countermeasures (TSCM) services and procedures.

Eavesdropping detection surveys are highly specialised services and the workshop gives those who are responsible over the TSCM function a way of understanding what is required and also a yardstick to measure the professionalism of their in-house or contract service providers.

Technical Surveillance Countermeasures (TSCM) is a set of measures used to identify and locate hostile and illegal technical devices planted at your company for information collection purposes. The workshop provides information on the nature of the electronic eavesdropping threat and the ways it can be countered.

Attendees will **become familiar** with the latest attack methods, technical security hazards, surveillance devices, TSCM procedures, professional equipment, planning, policies and procedures as well as how to select a specialist company with the right credentials when making use of outsourced TSCM services. It is important to integrate technical security with the existing facility and information security plans.

The cost to attend this unique workshop is R 5 700.00 (Including VAT) per person and includes the workshop material, refreshments, meals, workshop CD and certificate. Seating is limited and early booking is recommended.

At the conclusion of this workshop attendees will have a proper understanding of the technical threat their organisations face and how to counter those threats in a professional manner.
